MACT / GACT Compliance - Controls

For the types of boilers effected by this standard – Industrial Boilers, and Commercial/Institutional Boilers the Maximum Achievable Control Technology and Generally Available Control Technology are standards MicroMod can help you meet. We will work with your Boiler Operations Team and Boiler/Burner Vendors to determine the actions necessary to comply with this directive from a controls standpoint.

Specifically, we will:

- Inspect the Air to Fuel Ratio Control System (insure functionality and calibration)*
- Measure Carbon Monoxide (CO) in PPM and Oxygen in percent before and after*
- Tune the boiler by running it up and setting new curves, and then doing it again to test the results*
- Maintain on-sire and off-site records of compliance, corrective actions taken, and recommendations*

MicroMod Impact

MicroMod provides the insight to help our customers as they look to grow and update their processes, by providing cost-effective, easy to implement solutions, not just ideas.

We solve your issues - at your site – and train your people on the process. Our Field Service Professionals are used to evaluating and solving issues with instruments and controllers other than MicroMod's - we link with them and many times we are actually solving issues with our competitor's equipment. That's just who we are.

About MicroMod Automation & Controls

MicroMod Automation & Controls is a full-service instrumentation and process control provider. We are unique - There is no other automation and controls company like us. Our professionals bring a global process understanding, and decades of experience. We know enough to realize that if your process is unique, providing cookie-cutter solutions to a unique situation is not going to happen at MicroMod.

Other Services Offered

Field Services

- Preventative / Predictive Maintenance Programs / Repairs
- Troubleshooting and Resolving Issues
- EPA Testing / Combustion Testing
- Start-up/Commissioning
- System Configuration / Integration / Installation
- Legacy Migration / Conversion
- Instrumentation Calibration
- PID Loop Setup and Tuning
- System Training
- SCADA / HMI Programming
- PLC Interfacing / Programming
- Testing / Validation
- Instrument Calibration
- Training in Maintenance and Operations

Engineering Services

- System assessment
- System design / Specifications / Upgrading
- Panel design
- Panel Assembly
- Loop planning
- Project Management and training
- Drafting / Documentation
- Risk Assessment
